Dear Hiring Manager,

I am writing to express my interest in full-stack software engineering opportunities where I can contribute end-to-end product delivery across SaaS, fintech, health, and education technology.

Over eight years, I have built and shipped software for startups and product teams in India and for US-facing clients. I am currently a Full-Stack Developer at Unify Technologies in Hyderabad, working across fintech (including a micro-investment product), edtech (Open edX-based LMS with microservices), compliance tooling, and AI-driven health guidance—using React, TypeScript, Next.js, Node, NestJS, OpenAI integrations, and data stores including MongoDB and PostgreSQL on AWS.

Previously at Better Software in Bangalore, I worked as Full-Stack Engineer and Team Lead on B2B SaaS and AI-backed products: NLP/RAG platforms with OpenAI, enterprise workflow automation, facility-management SaaS at scale in India, and US solar lead-generation and ad-analytics products. At SeenIt Online, I led migration of a luxury commerce platform from PHP to the MERN stack and improved search with Elasticsearch. At Vawsum Schools, I delivered school fee payments, admissions tooling, RFID attendance, and operations features—and was recognized as Best Employee of the Year in 2018.

I am comfortable owning features from API design and data modeling through polished UI, collaborating with clients and technical stakeholders, and adapting under pressure—whether payment integrations, platform migrations, or shipping AI features on tight timelines. My experience spans TypeScript, React, Next.js, Node.js, NestJS, cloud platforms (AWS, Azure, GCP), Docker, Kubernetes, and hands-on AI/RAG work.

I hold an MCA from NIT Jamshedpur (CGPA 8.5) and a B.Sc (Hons) in Computer Science from JCC, Kolkata. I would welcome the chance to discuss how my experience can support your team's goals. Thank you for your consideration.

Sincerely,
Visakh Vijayan
